white, 1658.

A New
ALMANACK

And Prognostication for the
Year of our Lord God,
1658.

Being the second after Bissextile,
or Leap year.

Wherein is shewed the natural in-
clination of the air, and Judgement
of the weather, according to the Aspects
of the Planets, and positions
of the Stars.

With other Rules, Tables, and Directions,
Convenient in such a work to be noted.

By William White.

Calculated for the Meridian of *Todington*
in *Bedford-shire*, Where the Pole is Elevated
52 Degrees and 8 Minutes.

LONDON,

Printed by Robert White, for the
Company of Stationers. 1658.

The beginning and ending of the Terms
with their Returns and Effoin dayes, dayes of
exceptions, returna Brevium, and dayes of Appearance,
for this year, 1658.

Return dayes or dayes of Effoin.	Dayes of Exception.	Returna Brevium.	Dayes of Appearance
-------------------------------------	------------------------	---------------------	------------------------

M D C C. 1658.

**A Prognostication for
this Year of our LORD
GOD, 1658.**

Being the second from *Bissextile*, or Leap-year

**Wherein is contained a briebe
computation of years.**

**With a Geographicall Epitome
or Description of ENGLAND
and WALES, &c:**

*Together with all the Faies both fixed
and movable.*

**And at the end of the book, is the whole
Almanack, contained in one Leaf, for this
Year 1658. which being cut out, is fit to be
placed in a Table-Booke, Booke
of Accompt, or other.**

**LONDON,
Printed by E. T. for the Company of
STATIONERS, 1658.**

A very plain and easie table to find the
 true interest due upon any Sum of mony,
 from five shillings to an hundred pounds
 for a year or under, after the rate
 of six pounds in the
 Hundred.

A

A Geographicall epitomie of the Map of England
and WALES, wherein is shewed how each Shire
bounded and joynted to each other, and what Point of the Compass
every County lyeth from the Honourable City of London; (being
lately published) the use of which, and the next Table, is
explained, on the back side of the other leaf.

You may read after the next leaf the whole compass, length, and breadth
of England and Wales, with the chief islands of note belonging to the same;
also the compass, length, and breadth of Ireland: but for Scotland, it is hard
to be measured, the islands being so many, barren and scattered, being
above 300.

An alphabeticaall Catalogue of all the Shires, Cities, Market-Townes
Castles, Parishes, Rivers, and Parks, in everie particular Shire
in England and Wales; with the distance of miles,
and points of the compas from London.

Shires and Countreies.	Miles.	Points of the Compas.	Distances from London.	Distances from London.	Distances from London.	Distances from London.	Distances from London.	Distances from London.

The Explanation & Use of the former Map & Table

First for the Map: The figures in each shire of the map are to shew you the names of every County, & the Letters in the same are for uses, as I will shew hereunder.

You must understand that London is in Middlesex, which County of Middlesex hath the figures of 22 in it, & the little black speck . 02 spot therein signifieth London. Now if you would readily find the name of any shire therein, and how many miles the middle of the said County (in a straight line) is from London, & what point of the Compass it lyeth from the said City; resort then to the Table of Shires on the other side, and it will resolve you.

As for example, Barkshire it hath the figure of 1 in the map, & so it hath likewise in the Table; where is shewed that the middle or heart of that shire is 40 miles from London in a straight line, & it lyeth full west from the City, and looking forward toward the right-hand, it sheweth it hath no City, 11 Markets-Towns, 2 Castles, 140 Parishes, 3 Rivers, & 13 Parks. Again, Buckinghamshire hath the figure of 3 in the Map, & so it hath before it in the Table, the heart or middle of which shire is from London 35 miles, & lyeth North west & by west from the said City, it hath no City, 11 Markets-Towns, no Castle, 185 Parishes, 2 Rivers, and 15 Parks; and so of the rest.

The use of the Letters in the Maps is, this, S, Scotland, I part of Ireland, F part of France, M the Ile of Man, W the Ile of Wight, L the Lizard point, H Holy-head, the * the Irish Sea, B the British or English Sea, G the German Sea, Ba Barwick, D Dover, N Newcastle, C the points of Compass, S the Scale of Miles, by which you may measure the distance of any place, for every black degree is five miles, so is every white.

The 39 Shires from Barkshire to Yorkshire are the English shires, & the other 13 from Anglesey, to Radnorshire are Welsh.

It may be something further in Miles to the middle of each shire, by reason of the crookednesse of the Highways, Hills, and vallies, but what is here set down is meant in a straight line from London, as is said.

The

The Compass, Length and Breadth of *England*, and the chiefe Ilands thereof.

England is in compass ————— 1531. miles.
 The greatest length thereof Northwards and South-
 wards, from Barwick to the Lande end, is — 986. miles.
 The shortest length from Barwick to Calshot Castle in
 Hampshire, is ————— 186. miles.
 The broadest place from the Lands end to Sandwich,
 is ————— 179. miles.
 From S. Davids in the West in Pembroke-shire, through
 the midst of Worcester and Warwick-shire Eastward to
 Yarmouth in Norfolk, is ————— 240. miles.

The Ile of M A N.

The Ile of Man is in compass ————— 91. miles.
 The length is ————— 28. miles.
 The breadth is ————— 18. miles.

The Ile of A N G L E S E A.

The Ile of Anglesea is in compass ————— 85. miles.
 The length is ————— 21. miles.
 The breadth is ————— 18. miles.

The Ile of W I G H T.

The Ile of Wight is in compass ————— 57. miles.
 The length is ————— 22. miles.
 The breadth is ————— 11. miles.

The Compass, Length, and Breadth of

I R E L A N D.

Ireland, reteating the adjacent Ilands, and some Islands,
 is in compass ————— 948. miles.
 The length North and South, is ————— 303. miles.
 The breadth East and West, is ————— 113. miles.

The

The beginning, continuance, and ending of
the Kings Reignes since the Conquest, with a
the time how long it is since, to this Yeare, 1658.
Being fit for Scriveners, and such as are employ-
ed in Law causes.

A Prognostication.

The use of the Table of Kings.

This table of the Kings, I suppose may be necessary in the searching out the antiquity of many old evidences, which are dated many times by the years of the Kings then reigning, and not by the years of our Lord.

Example.

How long is it since the 10 year of King James:

Which is thus found.

King James began to reign Anno Domini 1602
to which adde the 10 years

	10
So it is Anno Domini	1612
which subtracted from	1638
the present year	
there remains the years since.	26

How to judge what Weather will follow, by
the rising and setting of the Sunne.

The Sun rising bright & clear, signifieth a pleasant day: If he rise fiery red, it promisseth rain: If in his rising he be thinly overcast with a cloud, it betokeneth foul weather: If the sun drive the clouds before him into the West, it signifieth fair weather. If at his rising there appear a circle about him, & vanish away equally, it betokeneth fair weather. Also if he setteth red, it signifieth fair weather: If at his setting he be of divers colours, or clouds like water, it threatneth rain. If at the rising of the Sun, his beams seem red, or long, or encompassed with red clouds it signifieth great winds: If at his rising there appear a thick mist, or if it raineth in the evening, it threatneth very foul weather to follow. Also if the Sun beams be spotted (either green, pale, or black, or ga. be red to a cloud, it signifieth rain. The Sun setting clear without any clouds, signifieth a fair night to ensue. If the

C

circle

circle, or circles about the Sun be clear, & of no continuance, look for fair weather: If there be many circles, it signifieth winds: the redder they are, the more vehement winds. If the circles are here & there broken, & are thick & black, look for cold wind or snow: or if he settle behind a great black cloud, rain follows.

How Weather is foreknown by the Moon.

If the Moon in the third day of her change, or 3 dayes before her full, or in the midst of the quarter, be found of pure light, nothing compassing her, the ends direct up, she promiseth faire weather: but being to red colour, prebokeneth winds. The Moon pale, or somewhat black or thick, threatneth rain. When the Moon is five dayes old, mark the tips of her horns, if they be blunt, it signifieth rain: if sharp pointed & pricking upwards, great winds. If in the fourth day after her change, she have a red circle about her, it signifieth winds and rain.

Of the judgment of Weather by the Stars.

If the Stars appear of much light, and seem to be of more bignesse and blazing then ordinary, it betokeneth great windes and moysture in that part where they seem so; and in Winter, great frosts. When diu Stars appear with long steeptayles, it threatneth windes, and great drought: the more in number, the greater will be the effect. Also when Starres seeme to shoot or fall, it signifieth great windes in that place: If they seem to shoot in diuers places, it signifieth diuers windes: If in all places, windes, thunder, lightning, and most tempestuous weather.

How to iudge of the weather by the Clouds.

Black clouds flying from the east, signifieth draine at night, if from the west, rain the next day; if they flye low, and appeare to settle upon the tops of hills, it is a signe of cold weather, if they

be full charged, and appear white like towers, haile is at hand: if white clouds appear in winter, two or three days together at sun rising, it is a signe of cold and snow, but black clouds signifie rain. A red sky in the evening, and a gray morning is a sign of a fair day. Mists falling in the morning, in spring or harvest, also mists over ponds or waters in the morning shew rain. If the clouds fly swiftly in the ayre, it signifies rain from that part of the heavens, especially from the north or south. If thick white clouds gathered together in many places like flocks, or heaps of wool appear in many places, it is a sign of rain: but if thick dark clouds towards the north or west neer the earth, presently rain, and if like hills a little above the earth, foul weather is ovet. If mists descend from the hills, and settle in the valleys, it is a sign of fair hot weather next day, or if white mists arise from the waters in the evening.

How to judge of the weather by the Rain-bow.

The natural signification of the Rain-bow, is to shew rain either past or to come. The Rain-bow appearing when it is fair, is a signe of foul weather: when it is foul if it appear, it is a sign of fair weather, the greener it appears the more rain, the redder the more wind; if before noon, then the rain is spent; if the rain-bow appear about one or two in the afternoon, then rain is neer. A rainbow in the morning is a sign of wet (unless there be drought in the ayre) if it appear in the evening, it is a sign of fair weather (unless the air abound with moisture.) A rain-bow at night opposite to the moon, is a sign of much small rain and wind to follow. A rain-bow after long rain is a sign of fair weather presently; if two rainbows appear together, it is a sign of rain within one or two days after.

The difference of the Tides in these places from London.

This Table shews what D makes an high tide at the new
and full, and also the difference of the Tides in these places
from the Tides at London Bridge : Therefore if you add
this difference of any place to the time of high Tide at Lon-
don any day (as it is set down in the Almanack) so you shall
have the true time of the Tide in any of these places. Note
if your sum exceed twelve hours, to count only the over-
plus.

White. 1658.

A Table to know how many Hours and Minutes the Moon shineth every Night in the Year.

The age of the Moon encreasing.	The Houres and Minutes that she shineth.		The age of the Moon decreasing.
☾	Houres.	Minutes.	☾
1	0	48	29
2	1	36	28
3	2	24	27
4	3	12	26
5	4	0	25
6	4	48	24
7	5	36	23
8	6	24	22
9	7	12	21
10	8	0	20
11	8	48	19
12	9	36	18
13	10	24	17
14	11	12	16
15	12	0	15

The Moons night shining.

The Moons morning shining.

The use of this Table.

Take the age of the Moon in the Almanack, then look the same in this Table, which you shall find either in the increasing or decreasing, and then in the middle Columnne you shall without further labour find the time of her shining.

As for Example: Upon the 9 day of January, I would know how many hours and minutes the Moon shineth: I find in the Almanack it is new Moon the 5 day: then reckoning from the 5 day, I find she is 4 dayes old: Then entering this Table, it sheweth, she shineth 4 hours and 0 minutes: So doth she likewise when she is 25 dayes old, &c.

A Prognostication.

The Explanation of a new and easie KALENDAR here following, for this present Yeare, 1638.

NOte that every Month containeth three Rows of Columns (the Figures for the number of dates excepted) The first Column toward the left hand containeth the Week Dayes and Sunday Letter; the second the Signs wherein the Moon is every day. And the third the Changes & Quarters of the Moon. Note that the being thus figured, both signify the New Moon; & placed thus way is the first Quarter: this is the Full Moon: and again this the last Quarter. Note also that the Figures over the head of the Moon, doe signify the hower of her Change, Full, or Quarters, and the Letters above or beneath, the time after noon, or after midnight, N standing for After noon till midnight, and M for after Midnight till Noone.

As for example, against the 23 day of January, being Saturday, I doe find the Moon (or Sign) in Aquarius, or the legs, and is thus O characterized, which is the change of new Moon at 11 in the forenoon. Again, on March 2 being Tuesday, I doe find the Moon in Aries, or the head, and is thus I characterized, which is the first Quarter at in the morning; and so of the rest.

Note also, that at the head of every month is placed the rising and setting of the Sun for the midst of every month. As for example, for the midst of January, the ☉ riseth at 7. of the clock and 44 minutes; and setteth at 4, and 11 minutes, &c.

It also containeth (on the back side of the Leaf) for every month the Feastes both Moveable and fixe, with the beginning and ending of every Terme: As Twelfth day is on the 6. of January, Easter-day is on the 11 of April, Whit Sunday is on the 30 of May. Terme begins on the 20 of April, and endeth on the 24 of May, &c.

A briefe and easie Almanack for this Yeare
 1658. which being cut out, is necessary to be
 placed into any Book of Accompts, Table-book,
 or other, conteyning the whole Kalendar, in
 a short method; By *William White.*
